Lynette Kvasny earned her Ph.D. in Computer Information Systems at Georgia State University. Her research focuses on how and why historically underserved groups appropriate information and communication technologies. She has designed, implemented and assessed community computing projects in economically challenged neighborhoods in Atlanta and Philadelphia. Her current research examines the performance of racial and ethnic identities using social media, the under-representation of women and minorities in information and communication technology educational programs and careers, and the impacts of racial, class and gender identities on health information seeking.
